

### Printing Facts

- An average worker prints 7,200 pages per year, 2,520 of which are waste
- An average worker wastes \$151 per year by printing unneeded content
- One tree is cut down for every 17 reams of paper
- Production of 1 ton of copy paper uses 11,134 kWh, the amount one household uses in a year
- Eliminating print waste is easy with GreenPrint!

### GreenPrint Enterprise Suite Benefits

- Eliminates waste before it goes to the printer!
- Removes unwanted pages
- Removes unwanted images
- Removes unwanted text
- One click to print in B&W
- Auto duplex setting
- Easy PDF creation
- Saves \$60 - 90 per user/year
- Individual user reports
- Comprehensive enterprise reports

### Enterprise Suite Savings

Below is GreenPrint's typical annual savings per 500 PCs:

- \$37,800
- 630,000 pages
- 150 trees
- 450 lbs of CO2

## GreenPrint Enterprise Suite Overview

### A Comprehensive Solution to Organizational Print Waste

Does the picture to the right look familiar? It's a scene that is found in organizations of all types and sizes all over the world. It's easy to see why people associate print waste with the printer itself – after all, that's where the waste appears. However, it is at the computer where we create print jobs, many of which contain images, content, or even entire pages that we don't really need. By the time the job shows up at the printer, the damage is done: the waste is generated, the financial and environmental loss has occurred, and someone will now have to deal with the cost and the mess.

GreenPrint's Enterprise Suite is an intuitive and innovative software product that makes it easy for users to only print what they need while simultaneously providing comprehensive enterprise print analytics. GreenPrint allows unwanted pages, images and content to be identified and eliminated before being sent to the printer - reducing paper, ink, toner, and energy consumption.

Organizations typically save 17% or more of their total enterprise printing expense, which equates to an average of \$75 per employee per year. GreenPrint is easy to deploy, requires little active IT management, and generally delivers an ROI in a few short months. It also allows your organization to have a meaningful and quantifiable impact on the environment.

### Enterprise Analytics

It has often been said that you can't manage what you don't measure, and tackling organizational print waste is no exception. GreenPrint's Analytics module is an integrated component of the GreenPrint Enterprise Suite. It collects and reports an incredible array of data that allows our customers to better understand their print environments – and therefore to manage them more efficiently. You probably know that there is a lot of waste in your print environment, but do you know how much? Do you know why the waste is occurring or how to make it stop? Do you know the real costs of printing in terms of money, resources, time and environmental impact? These questions, and others, are ones that are answered by GreenPrint's Analytics module!
